

TO WHOM IT MAY CONCERN

23 Shore Street Port Wemyss

When approaching Blairs to supply sash and case windows to this location, they “advised against timber windows ...due to the severe exposure. It would be more suitable for either PVCu or aluminium”.

After extensive discussions they then suggested a hardwood version of their new double swing window. These have been selected as the best candidate for the project, given the exposure to extreme weather.

Noting that:

Double Swing Windows -

- Blairs have advised they have a new window type that has similar characteristics to Timber Sash and Case windows, but has modern canopy action hingers so is more robust for exposed locations
- There would still likely be a limited warranty on the paint finish to exposed elevations (this would be 5 years based on annual inspection with maintenance).
